VALUE STREAM MAPPING

2
workshop
days

Everyone is striving towards the same goal. Is that a cliché or is it fully achievable? To be able to reduce lead time with half in only three months, is it really viable?

Value Stream Mapping is an efficient tool used to quickly see improvement options from a horizontal perspective. This method is often called "Learning to See". Value streams emanate from a series of operational steps linking different people or functions together in order to accomplish what the receiver or customer asks for.

The workshop illustrates the difference between a traditional process mapping and a mapping according to Lean principles. It is uniquely adapted to work flows within services, facilities and administration areas.

Purpose

- To develop the ability to "see the flow" in work processes.
- To originate from customer demands and needs.
- To identify waste.
- To train value stream mapping and understand the method.

Program

This 2-day workshop contains:

DAY 1

- Lean introduction.
- Understand flow.
- Carry out scoping.
- Define customer demands.
- Make a Current State Map.
- Identify waste.
- Make a Cause and Effect Analysis.

DAY 2

- Introduction to tools.
- Starting from customer demands.
- Produce a Future State Map.
- Getting Management Commitment.
- Important components of an Action Plan.
- Learning and Problem Solving - PDCA.
- Create an Action Plan.
- Types of reports from a VSM.
- Decision making process of and commitment.

For whom?

For the individual who wants to try the most powerful of the Lean tools – Value Stream Mapping.

*"The Complete Lean Enterprise"
is used in this workshop.*
